

DHIS 2 provides excellent visual tools for analysis and representation of information to managers for making better health decisions

Case-based Patient Summary Report

DHIS 2's integrated GIS is used by the WHO as OpenHealthMapper for representation of health indicators on a map.

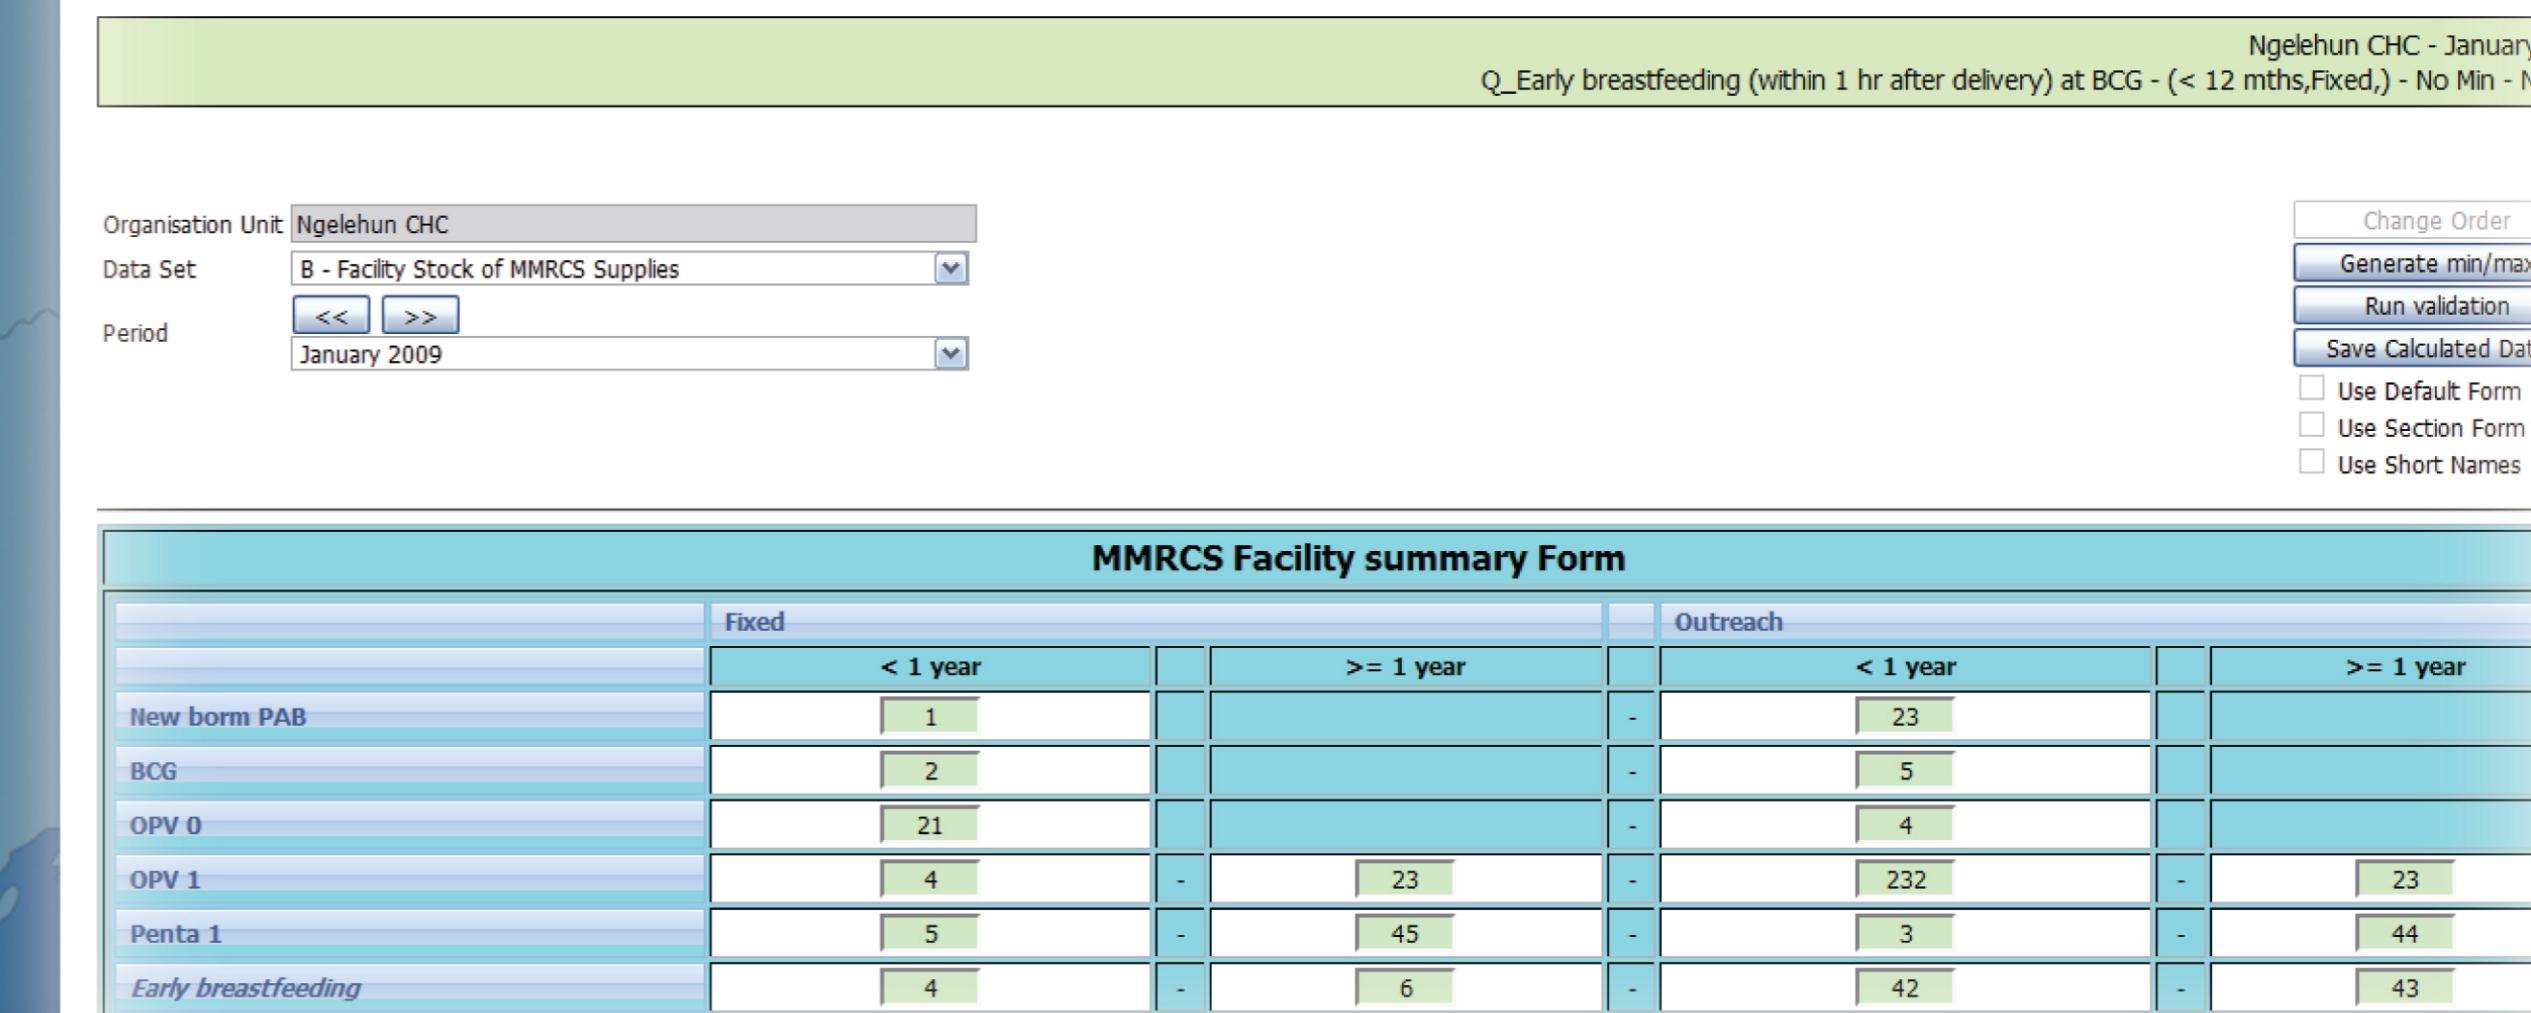

DHIS 2 National Data Warehouse

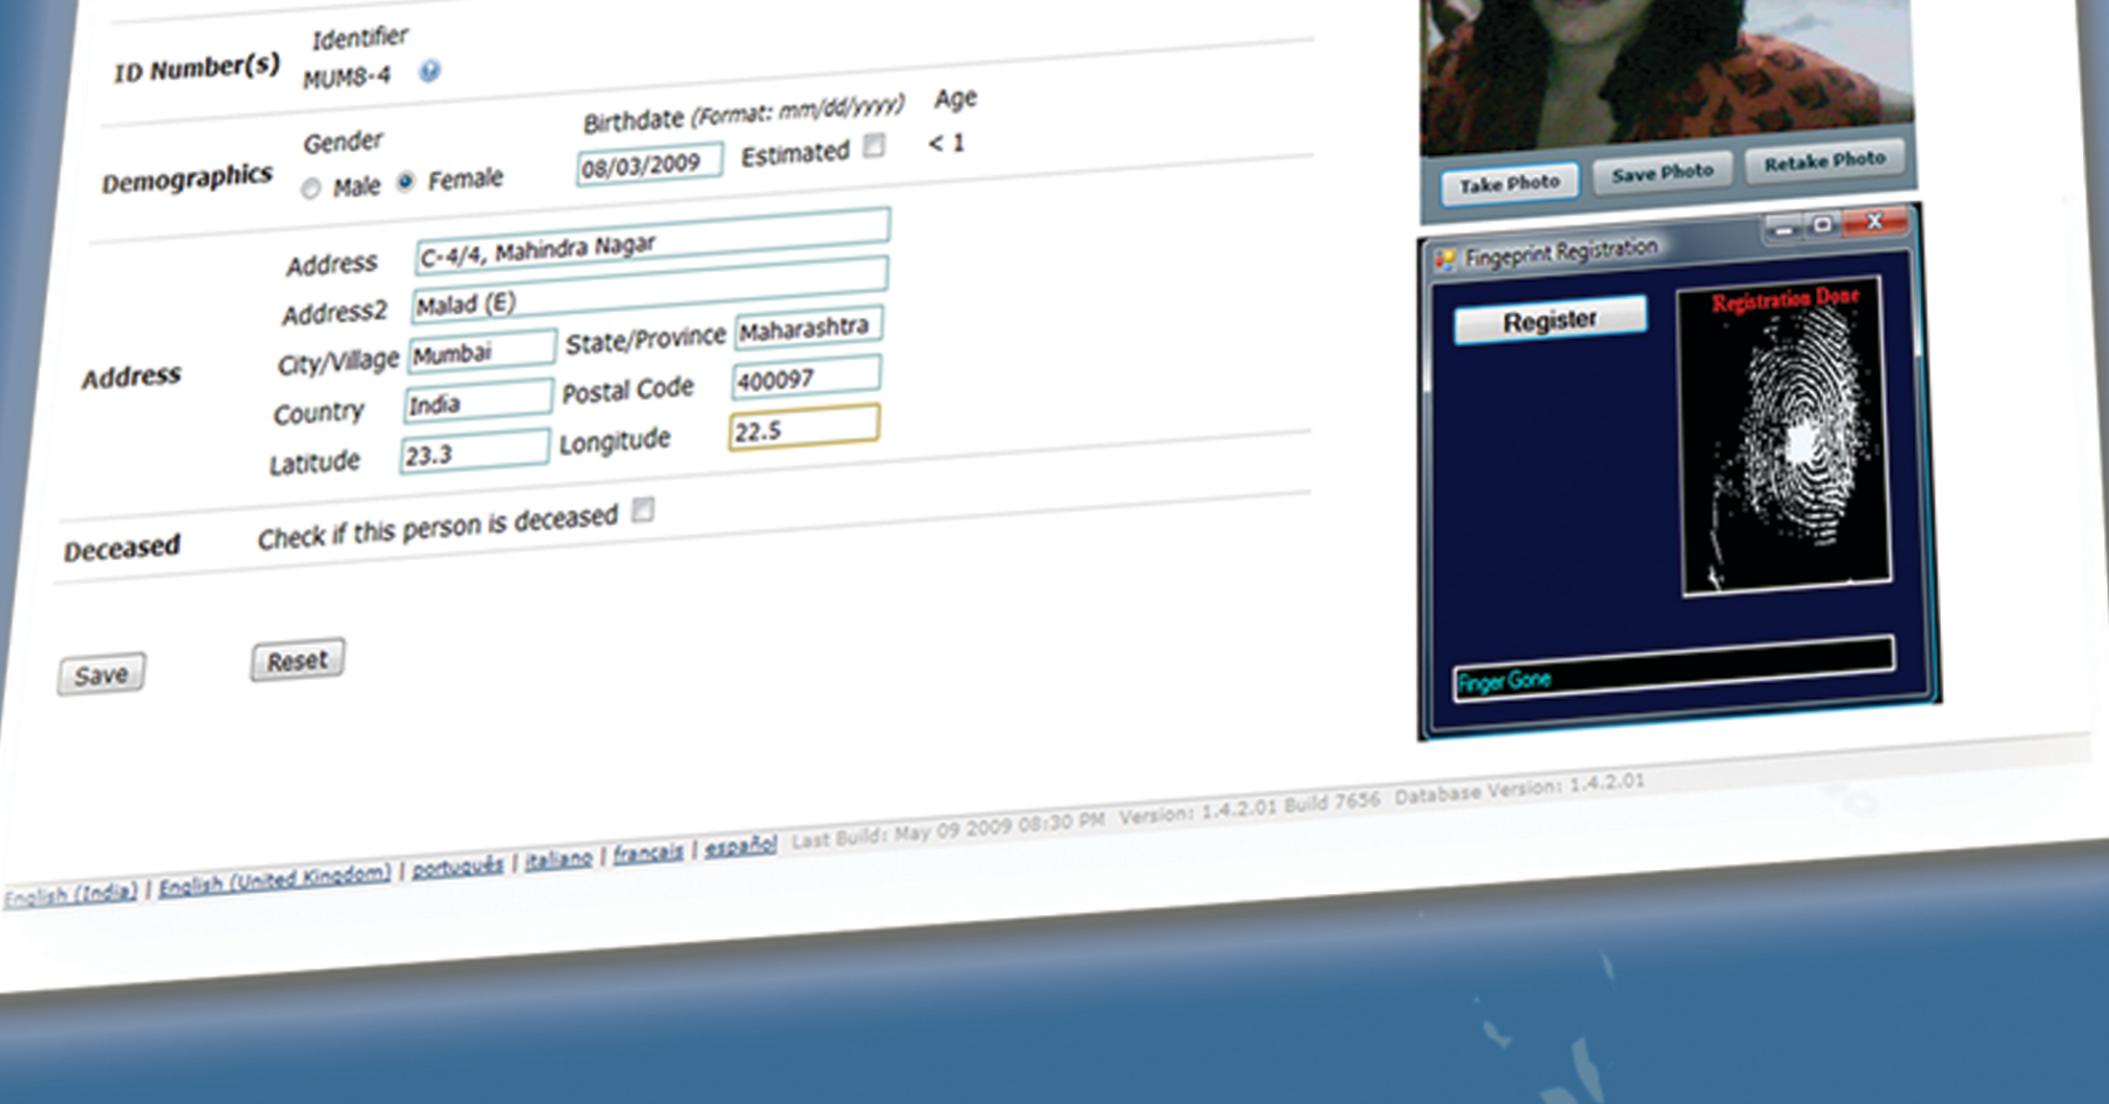

DHIS is a district-based country data warehouse or repository for aggregated data and case-based community data, integrating various data sources; from health services & programs, disease surveillance, census, surveys, health facility infrastructure, human resources, medical records etc.

Customized Data Entry

Flexible Data Collection through online and offline installations
From customized data entry through web browsers, or through Java applications running on mobile phones

Data can be exchanged from other systems such as OpenMRS (Medical Records), iHRIS (Human Resource records)
